

# UNDERGRADUATE TRANSFER MANAGEMENT SYSTEM (UTMS) SOFTWARE

## REQUIREMENTS SPECIFICATION (SRS)

Version 1.0 – Draft

Prepared by: Oğuzhan Çakal Date:

18/11/2025

Version 2.0 Full Submission Prepared

by: Abdullah Semih Çetin Date:

23/11/2025

---

## 1. INTRODUCTION

### 1.1 Purpose

This Software Requirements Specification (SRS) defines the functional and non-functional requirements of the Undergraduate Transfer Management System (UTMS) developed for İzmir Institute of Technology (IZTECH).

This SRS is fully based on the Problem Analysis Report and expands those findings into software-level requirements.

### 1.2 Scope

UTMS is a centralized web platform that digitizes and automates the entire undergraduate transfer process. The system supports both students and administrative units throughout all key workflow stages, including:

- **Application Creation & Document Submission:** Applicants create an online application, fill required fields, and upload documents such as transcripts, course descriptions, and identification files.
- **Document Verification:** ÖİDB staff review submitted documents for completeness, correctness, and compliance with format requirements.
- **Eligibility & Regulation Checks:** The system evaluates CGPA, quota availability, and program-specific rules based on IZTECH and YÖK regulations.
- **Commission Evaluation:** Departmental Transfer Commissions (YGK) review applications, assess course equivalencies, add internal notes, and record preliminary decisions.
- **Approval Workflow:** Faculty Boards and administrative units finalize decisions, approve transfer results, and submit finalized records.
- **Status Tracking & Notifications:** Applicants receive real-time updates (e.g., *Submitted, Under Review, Revision Required, Accepted, Rejected*) and automated notifications.
- **Result Publication & Reporting:** Final decisions are published, and reports are generated

for ÖİDB and related administrative units.

Out of Scope:

Course equivalence (intibak) decision-making remains fully manual. The system only assists by presenting documents.

### **1.3 Definitions, Acronyms, and Abbreviations**

#### **UTMS — Undergraduate Transfer Management System**

A centralized web-based platform developed for IZTECH to digitize and automate the undergraduate transfer process. It enables applicants to create applications, upload

required documents, track status updates, and access results. It also provides administrative units (Registrar's Office, YGK, Faculty Board) with tools for reviewing, validating, evaluating, approving, and finalizing transfer applications.

---

### **ÖİDB — Registrar's Office**

The university unit responsible for student records, registration procedures, official documentation, and institutional compliance. Within UTMS, ÖİDB performs tasks such as preliminary application checks, document verification, eligibility approval, routing applications to departments, and publishing final results.

---

### **YGK — Departmental Transfer Commission**

An academic committee established within each department. The commission reviews applicants' academic history, evaluates transcripts and course compatibility, assigns academic evaluation scores, adjusts or confirms rankings, and finalizes departmental decisions before forwarding them to the Faculty Board.

---

### **API — Application Programming Interface**

A standardized software interface that allows different systems to communicate and exchange data. In UTMS, APIs are used for integration with external services such as ÖSYM and YÖKSİS to validate exam scores, retrieve transcript information, and synchronize applicant data automatically.

---

### **YÖK — Council of Higher Education**

The governing body responsible for regulating higher education institutions in Türkiye. YÖK sets the fundamental rules for undergraduate transfer processes, such as minimum GPA requirements, semester conditions, and institutional eligibility criteria. UTMS's automatic eligibility validation is built in compliance with these regulations.

---

### **AS-IS — Current Manual/Digital Process**

The existing process before the UTMS is implemented. Although some parts are already digital (e.g., file submissions), many steps are still manual, such as document verification, communication between units, and eligibility checks. The AS-IS model identifies bottlenecks, inefficiencies, and error-prone areas in the current workflow.

---

### **TO-BE — Automated Future Model**

The improved and automated version of the transfer process after implementing UTMS. Tasks such as eligibility validation, GPA conversion, notifications, workflow routing, and digital signatures are handled automatically by the system. The goal is to reduce workload, minimize human error, increase transparency, and speed up the decision-making process.

---

### **Intibak — Course Equivalence Evaluation**

The formal assessment of whether courses previously taken by an applicant are equivalent to the courses in the destination program's curriculum. It includes reviewing syllabi, credits, course outcomes, and academic performance. UTMS supports intibak only by providing documents and information; the decision-making process remains fully manual and is performed by the YGK.

---

### **SFL — School of Foreign Languages (YDYO)**

The institutional unit responsible for assessing and validating applicants' English language proficiency. Within UTMS, SFL reviews uploaded language documents (TOEFL, YDS, Proficiency Exam results), verifies exemption eligibility, schedules and evaluates proficiency exams when needed, and records the official language decision required for academic evaluation. SFL's validation directly determines whether an applicant satisfies the English requirement before the application can proceed to departmental and commission stages.

## 1.5 Overview

This SRS includes overall description, functional requirements, use cases, performance requirements, design constraints, database requirements, and UML use case model.

- **Section 2 — Overall Description:**  
Provides the general perspective of the UTMS, including system environment, user characteristics, product functions, constraints, assumptions, and future requirements.
- **Section 3 — Specific Requirements:**  
Contains detailed functional and non-functional requirements. This includes all use cases (applicant, ÖİDB, YGK, Faculty Board, and system-level automation), external interface requirements, performance requirements, logical database requirements, design constraints, and additional system rules.
- **Section 3.1 — Use Cases:**  
Presents comprehensive use case descriptions covering all actors and system processes, including login, registration, document upload, application submission, eligibility validation, academic evaluation, ranking, approval workflows, digital signatures, and automated system actions.
- **Section 3.2 — External Interfaces:**  
Defines interactions with ÖSYM, YÖKSİS, email services, and digital signature modules.
- **Section 3.3 — Performance Requirements:**  
Specifies response time thresholds, concurrency expectations, availability requirements, and mobile responsiveness.
- **Section 3.4 — Logical Database Requirements:**  
Describes the main entities, relationships, and essential data elements required for UTMS operation.
- **Section 3.5 — Design Constraints:**  
Outlines regulatory, security, infrastructure, and logging constraints that the system shall adhere to.

- **Section 3.6 — Other Requirements:**

Includes versioning, auditability, traceability, parallel approval support, and general compliance expectations.

---

## **2. OVERALL DESCRIPTION**

### **2.1 Product Perspective**

The AS-IS workflow is digital but largely manual and sequential. The TO-BE system replaces manual checks, delays, and communication bottlenecks with automation, dashboards, digital signatures, and API validations.

The UTMS interacts with:

- Applicant users
- ÖİDB staff
- Departments C YGK
- Faculty Board
- External systems (ÖSYM, YÖKSİS for verification),
- YDYO

### **2.2 Product Functions**

1. Application creation and submission
2. Document upload
3. Automated eligibility validation
4. GPA conversion and ranking
5. System-assisted course equivalence support
6. Workflow routing and approvals
7. Digital signatures
8. Result publication
9. Notifications and dashboards
10. Full audit logging
11. English proficiency validation

### **2.3 User Characteristics**

#### **Applicant**

- Basic computer literacy

- The User Characteristics section is too short and incomplete. It should include each user's technical expertise, brief description, and responsibilities to properly represent user profiles.
- Needs a clear, guided interface and transparent application status.

## ÖİDB

- Medium technical proficiency; experienced in administrative workflows.
- Medium technical proficiency; experienced in administrative workflows.
- Performs initial eligibility checks, document verification, and routing.

## YGK

- Academic evaluators with advanced expertise.
- Review academic details, ranking scores, and prepare intibak (course equivalency).
- Need detailed academic data and structured evaluation tools.

## Faculty Board

- High-level academic authority.
- Performs final approval of YGK decisions.
- Needs summarized decision packages and clear confirmation interfaces.

## YDYO

- Evaluators responsible for English proficiency verification.
- Reviews uploaded language documents or exam results.
- Requires a focused interface to approve/reject language eligibility efficiently

## 2.4 Constraints

- Shall comply with YÖK and IZTECH regulations
- The system **shall depend** on the availability of ÖSYM/YÖKSİS APIs for verification processes.
- Final academic decisions **shall remain** human-driven and cannot be fully automated.
- User sessions **shall expire** after a defined timeout period (e.g., 20 minutes of inactivity).

- Uploaded documents **shall be restricted** to allowed formats (PDF/JPG/PNG) and maximum file sizes.
- Submitted application data **shall remain immutable** after final submission, except where explicitly permitted by institutional rules.

#### 2.4.1 Internal Processing Rule — BR-INT-01 Automatic Eligibility Validation Logic

Description:

The system automatically performs eligibility validation without any external actor. This process includes retrieving academic data, applying YÖK and IZTECH eligibility rules, checking thresholds (GPA, semesters, credits), and producing a deterministic eligibility result.

Details:

- Trigger: A new application is submitted or resubmitted.
- The system retrieves academic records via YÖKSİS and ÖSYM integrations.
- Validation and rule-checking steps are executed internally.
- The system logs the operation and stores eligibility results as Eligible / Not Eligible.
- Any inconsistencies are automatically flagged for manual review by ÖİDB.
- This mechanism is internal processing and not a user-initiated use case.

#### 2.4.2 Internal Processing Rule — BR-INT-02 GPA Conversion Logic

Description:

The system automatically converts applicants' raw transcript grades into standardized GPA values using IZTECH and YÖK conversion rules. This process does not involve any external actor and is executed solely as a background system function.

Details:

- Trigger: A transcript is uploaded, updated, or retrieved via ÖSYM/YÖKSİS integrations.
- The system parses raw course grades and applies the official conversion tables.
- The system computes normalized GPA values (e.g., 4.00 scale and 100-point equivalent).
- The conversion result is stored in the applicant's academic record.
- All conversion operations are logged for auditability.
- Inconsistencies or missing grade formats are flagged for ÖİDB review.
- This behavior is internal system processing and not a standalone use case.

### 2.5 Assumptions and Dependencies

APIs will be accessible

- Applicants submit truthful data
- Process deadlines are fixed by regulation

### 2.6 Apportioning of Requirements

- Multi-factor authentication in future versions
- Automated fraud detection for suspicious or tampered documents.
- Integration with digital signature platforms (e-İmza / e-Devlet).
- Extended reporting and analytics dashboards for administrators.

- Real-time API push notifications from UBYS / ÖSYM / YÖKSİS instead of pull-based queries.

### 3. SPECIFIC REQUIREMENTS

#### 3.1 USE CASES

|                |        |
|----------------|--------|
| Use Case ID:   | LOG-01 |
| Use Case Name: | Login  |

|               |               |                    |                      |
|---------------|---------------|--------------------|----------------------|
| Created By:   | Oğuzhan Çakal | Last Updated By:   | Abdullah Semih Çetin |
| Date Created: | 13.11.2025    | Date Last Updated: | 23.11.2025           |

|                   |                                                                                                                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Actor:            | Applicant                                                                                                                                                                                     |
| Description:      | Applicant accesses the system using valid login credentials (Student ID + password). The system authenticates the user and grants access to the dashboard.                                    |
| Preconditions:    | <ul style="list-style-type: none"><li>• Applicant has a registered and verified account.</li><li>• System authentication service is operational.</li></ul>                                    |
| Postconditions:   | <ul style="list-style-type: none"><li>• Success: User authenticated, session created, redirected to dashboard.</li><li>• Failure: Login attempt logged, user remains on login page.</li></ul> |
| Priority:         | High                                                                                                                                                                                          |
| Frequency of Use: | Frequent                                                                                                                                                                                      |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Normal Course of Events: | <ol style="list-style-type: none"> <li>1. Actor opens login page.</li> <li>2. Actor enters Student ID and password.</li> <li>3. Actor clicks “Login”.</li> <li>4. System validates credentials.</li> <li>5. System authenticates user and redirects to dashboard.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                               |
| Alternative Courses:     | LOG.1.AC.4.1: Incorrect credentials. System displays error and allows retry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Exceptions:              | EX-01: Database not reachable.<br>EX-02: Authentication service down.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Includes:                | None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Special Requirements:    | <input type="checkbox"/> Password <b>shall be encrypted</b> using secure hashing algorithms.<br><br><input type="checkbox"/> The <b>system shall log all login attempts</b> , including failed ones, for security auditing.<br><br><input type="checkbox"/> First <b>name and last name shall comply with validation rules</b> , including: <ul style="list-style-type: none"> <li>• Allowed characters: alphabetic characters only (A–Z, a–z).</li> <li>• Length limits: minimum 2 characters, maximum 50 characters.</li> <li>• No digits, emojis, or special characters except a single hyphen or apostrophe (if institutionally permitted).</li> </ul> |

|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <p>Actor selects an application.</p> <p>System loads basic status but fails to retrieve some timeline nodes (e.g., some logs unavailable).</p> <p>System displays existing status and timeline points.</p> <p>System marks missing points with a generic placeholder (e.g., “Pending Information”).</p> <p>System logs data load inconsistency.</p> <p>TS.1.AC.1.1 — Filtering Results</p> <p>Actor applies filters (e.g., show only submitted, only reviewed applications).</p> <p>System updates the application list according to filters.</p> <p>Actor proceeds to view the details of a filtered item.</p>                                                                                                     |
| Exceptions: | <p>TS.1.EX.1 — Status Service Unavailable</p> <p>Condition: The system cannot retrieve current status or timeline data due to a temporary internal service failure.</p> <p>System Response:</p> <p>Display: “Status information is temporarily unavailable. Please try again later.”</p> <p>Show cached last-known status if available.</p> <p>Log the service failure for system administrators.</p> <p>TS.1.EX.2 — Data Retrieval Failure (Database Error)</p> <p>Condition: Database read error prevents loading applications or timeline entries.</p> <p>System Response:</p> <p>Display: “We could not load your application details due to a system error.”</p> <p>Do not show partial or corrupted data.</p> |

Log the error with timestamp and user ID for diagnostics.

#### TS.1.EX.3 — Unauthorized Access Attempt

Condition: The user attempts to view an application they do not own (e.g., manipulated URL or forced access).

System Response:

Display: "You are not authorized to view this application."

Redirect to dashboard.

Log the unauthorized attempt as a security event.

#### TS.1.EX.4 — Missing Timeline Records / Inconsistent Audit Log

Condition: Timeline cannot be constructed because key status changes or audit entries are missing.

System Response:

Display: "Some status details are unavailable at the moment."

Show only the current status.

Log the inconsistency for review by system administrators.

#### TS.1.EX.5 — Network Timeout / Connectivity Issue

Condition: Request times out or network connection is lost while loading status.

System Response:

Display: "Network issue — unable to load status. Check your connection and try again."

Retry button becomes available.

No changes made to application data.

#### TS.1.EX.6 — Concurrency Conflict

Condition: The application's status changes at the exact moment the user tries to load it (e.g., ÖiDB updates it).

System Response:

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Normal Course of Events: | <ol style="list-style-type: none"> <li>1. Actor clicks “Forgot Password.”</li> <li>2. Actor enters their registered email or student ID.</li> <li>3. System validates that the email/ID exists and is verified.</li> <li>4. System generates a one-time password-reset token and stores it with an expiry time.</li> <li>5. System raises a password-reset notification event and invokes SYS.3 — Automated Notification Dispatch to send the reset email to the verified address.</li> <li>6. Actor opens the reset link from the email and enters a new password.</li> <li>7. System validates the new password (complexity, reuse rules).</li> <li>8. System saves the new password and invalidates the old one and the used reset token.</li> <li>9. System raises a “password changed” notification event and again invokes SYS.3 to generate any confirmation email and/or internal notification.</li> <li>10. System logs the password-reset flow in the audit log (request, token use, password change).</li> </ol> |
| Alternative Courses:     | <p>RP.1.AC.2.1 — Email/ID Not Found</p> <p>Actor enters an email/ID that does not match any registered account.</p> <p>System does not reveal whether the account exists for security reasons.</p> <p>System displays a generic message:<br/>“If an account exists for this email/ID, a reset link has been sent.”</p> <p>No reset token is generated.</p> <p>System logs the attempt.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

#### RP.1.AC.3.1 — Email Not Verified

Actor enters a valid but unverified email/ID.

System detects that the email is not verified.

System displays:

“Your email address must be verified before you can reset your password.”

System optionally offers to resend the verification email.

No reset token is generated.

#### RP.1.AC.6.1 — New Password Fails Validation

Actor opens the reset link and enters a new password.

System validates the password against complexity and reuse rules.

System detects a violation (too weak, reused, invalid format).

System displays specific error messages (e.g.,

“Password must be at least X characters and contain ...”).

Actor can correct the password and submit again without requesting a new link.

#### RP.1.AC.5.1 — Token Already Used or Manually Canceled

Actor clicks a reset link that has already been used or manually revoked.

System detects that the token is no longer valid but not expired.

System displays:

“This reset link has already been used. Please request a new password reset if needed.”

| Special Requirements: | <p>Reset link shall be single-use and time-limited (e.g., expires after 30–60 minutes).</p> <p>The reset token shall be cryptographically secure and unguessable.</p> <p>The system shall rate-limit password reset requests per user and per IP to prevent abuse.</p> <p>The new password must satisfy the system’s password complexity and reuse rules (e.g., cannot be the last N passwords).</p>                                                                                                                                                                                                                                                                                                                                                                                                             |

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | <p>On successful password change, the system should invalidate any active login sessions if required by security policy.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| Assumptions:      | <p>The user has access to the verified email account associated with their UTMS profile.</p> <p>Email delivery infrastructure (SMTP or equivalent) is generally available, even if temporary failures may occur.</p> <p>Users requesting a reset are doing so from a trusted device/network or accept the inherent risk.</p> <p>Multi-Factor Authentication (MFA), if added in future versions, will be integrated into this flow but is not mandatory in this version.</p>                  |
| Notes and Issues: | <p>Email delivery delays may cause users to receive reset links later than expected; token expiry time must account for this.</p> <p>If the institution later supports login via federation (SSO), this use case may not apply to all accounts.</p> <p>Future versions may require additional confirmation (e.g., MFA challenge) before allowing the password change.</p> <p>Security policies might require extra monitoring of frequent reset attempts for potential account takeover.</p> |

| Description:   | ÖİDB staff reviews a newly submitted application to check if the applicant uploaded all mandatory documents, provided the required information, and complied with general institutional rules. This review determines whether the application can advance to eligibility verification. |
| Preconditions: | 1. Applicant has submitted an application.                                                                                                                                                                                                                                             |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

Academic Year  
2024-2025[← Back to Application](#)**Return Application for Correction**

The applicant will be notified via email and can resubmit their application after making the required corrections.

**Important**

Please provide clear and specific instructions on what needs to be corrected. This will help the applicant address the issues efficiently.

**Correction Notes \***

Please describe the corrections needed in detail. For example: 'The official transcript'

0 characters

Cancel

Send Back to Applicant

**What happens next?**

The applicant will receive an email notification

Application status will change to "Correction Required"

The applicant can update and resubmit their application

You will be notified when they resubmit

### Eligibility Review

Verify applicant meets all transfer eligibility requirements

 **Eligibility Status**  
Sarah Johnson - STU-2024-1523

Eligible

 All Requirements Met

The applicant meets all eligibility requirements for transfer to the Software Engineering program.

 **GPA Requirement**

Minimum 3.0 GPA required  
Required: 3 Actual: 3.85

 **Semester Requirement**

At least 2 semesters completed  
Required: 2 Completed: 4  
semesters semesters

 **Credit Requirement**

Minimum 30 transferable credits  
Required: 30 credits Transferable: 68 credits

 **Additional Compliance Checks**

**Prerequisite Courses**  
8 of 8 courses completed

**Academic Good Standing**  
No academic probation or disciplinary actions

**Program-Specific Requirements**  
Meets Software Engineering program requirements

|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description:             | YGK member performs academic evaluation for each applicant. The evaluation score contributes to the final ranking according to the weighting rules defined in the Department Ranking Settings (e.g., GPA weight, academic evaluation weight, eligibility thresholds).                                                                                                                                                                                                                                                                                                            |

| Software Engineering | Nov 15, 2024    |

## Exception Notes \*

Document special circumstances, exceptions to standard requirements, or unique considerations for this application

Exception notes will be reviewed by the admissions committee and permanently recorded in the applicant's file

[x Clear Exception](#)[Save Exception](#)

## Important Information

Exception markings are subject to committee review and approval  
All exceptions must be thoroughly documented with supporting evidence  
Exception notes are auditable and will be included in official records  
Exceptions do not guarantee acceptance but ensure fair consideration

## Department Review Finalization

Engineering Department – Fall 2024 Transfer Applications

Total Applications  
24Evaluations Done  
24 / 24Exceptions Marked  
3

## Review Completion Checklist

Verify that all required steps have been completed before finalizing

All Evaluations Completed

Academic evaluations have been completed for all submitted applications

Ranking Finalized

Final ranking order has been reviewed and approved by department

Exceptions Reviewed

All special exceptions and circumstances have been documented and reviewed

Please complete all checklist items before finalizing.

## Important: This action will lock all applications

Once finalized, the following changes will take effect:

All applications will be locked and cannot be modified

Evaluations and scores will be permanently recorded

Final rankings will be submitted to the admissions committee

Exception notes will be sealed in the official record

Department review phase will be marked as complete

This action cannot be undone without administrative intervention.

Checklist Incomplete

Finalize Department Review

## Next Steps After Finalization

Applications will be forwarded to the central admissions committee

Committee will review all department recommendations

Final admission decisions will be made by the admissions office

Digital Signature Required

Enter your secure PIN or authentication token to sign the final approved list

Important: Digital Signature Requirements

Your digital signature legally binds you to this approved list  
The signature will be timestamped and stored in the audit log  
Once signed, the list cannot be modified or reversed  
Applicant notifications will be automatically triggered  
This action requires your secure PIN or authentication token

Secure PIN / Authentication Token \*

Enter your secure PIN or token

Minimum 6 characters required for authentication

Signature Authentication

256-bit encrypted digital signature

Sign Final List

Security & Compliance Information

- Digital signatures are compliant with institutional policy and legal requirements
- All signing activities are logged and monitored for security purposes
- Timestamp and IP address will be recorded with the signature
- Signed documents are stored in a secure, tamper-proof archive

Automated Eligibility Validation Results

System-generated validation checks executed on November 23, 2024 at 14:23:10 UTC

GPA Check

Minimum GPA requirement validation

Passed

GPA: 3.85 / Required: 3.00 minimum  
2024-11-23 14:23:15

Semester Requirement

Academic progression validation

Passed

Completed: 4 semesters / Required: 2 semesters minimum  
2024-11-23 14:23:16

Credit Threshold

Minimum credit hours validation

Passed

Earned: 68 credits / Required: 60 credits minimum  
2024-11-23 14:23:17

YÖK Rule Compliance

Turkish Higher Education Council regulations

Warning

1 exception found: Late submission grace period applied  
2024-11-23 14:23:18

## Automated GPA Conversion Results

System-generated conversion using standardized algorithms

|               |                |                |           |
|---------------|----------------|----------------|-----------|
| Student Name  | Student Number | Application ID | Completed |
| Sarah Johnson | STU-2024-1523  | APP-2024-002   |           |

## GPA Conversion

Automated conversion from original grading scale to standardized 4.00 scale

Original GPA

3.45 /  
4.00

Turkish University System

Converted GPA

3.45 /  
4.00

Standard 4.00 Scale

## Conversion Rule Applied

Direct Transfer (Same Scale)

## Processed Date &amp; Time

2024-11-23 14:25:30

## System Version

UTMS GPA Converter v2.1.3

## Conversion Details (System-Generated)

Detailed information about the automated conversion process

Conversion Algorithm

YÖK Standard Conversion Matrix 2024

Source Institution

Ankara University - Engineering Faculty

Target Institution

Istanbul Technical University

Credits Evaluated

68 credit hours

Courses Included

34 courses

Weighted Calculation

Credit-hour weighted average applied

Rounding Method

Round to two decimal places

Validation Status

Passed all integrity checks

## Automated Conversion Information

- GPA conversion is performed automatically using YÖK-approved standardized algorithms
- All conversions are validated against institutional transfer policies and accreditation standards
- Results are generated in real-time and recorded in the student's academic record
- Manual review is required only for non-standard grading systems or special circumstances

| Description:             | The system automatically sends notifications to applicants and staff based on status changes.                                                                                                                                                                                                         |
| Preconditions:           | Application exists.<br>Notification triggers configured.                                                                                                                                                                                                                                              |
| Postconditions:          | Notification delivered (or queued if failed).                                                                                                                                                                                                                                                         |
| Priority:                | High                                                                                                                                                                                                                                                                                                  |
| Frequency of Use:        | Multiple times per application (triggered by status changes, typically 5-10 times per application lifecycle)                                                                                                                                                                                          |
| Normal Course of Events: | <ol style="list-style-type: none"> <li>1. System detects event (e.g., returned, approved, published).</li> <li>2. Determines recipients.</li> <li>3. Generates message.</li> <li>4. Sends email + internal notification.</li> <li>5. Logs action.</li> </ol>                                          |
| Alternative Courses:     |                                                                                                                                                                                                                                                                                                       |
| Exceptions:              | SYS.3.EX.1 — Email server down<br>SYS.3.EX.2 — Invalid email address                                                                                                                                                                                                                                  |
| Includes:                |                                                                                                                                                                                                                                                                                                       |
| Special Requirements:    | Notifications must be sent within 2 seconds.                                                                                                                                                                                                                                                          |
| Assumptions:             | <ul style="list-style-type: none"> <li>-Users have valid email accounts and the notification service remains available during system operation.</li> <li>-Email templates are pre-configured for all notification types.</li> <li>-SMTP service configuration is correct and authenticated</li> </ul> |
| Notes and Issues:        |                                                                                                                                                                                                                                                                                                       |

Notification System Information

- Email notifications are sent automatically based on application workflow events
- Delivery status is tracked in real-time with automatic retry for failed messages
- All notification activity is logged for audit and troubleshooting purposes
- Email templates are managed centrally and comply with institutional communication standards

---

## 3.2 EXTERNAL INTERFACES

### ÖSYM API: Exam score validation

- Validates the applicant's national exam scores (YKS/ÖSYM results) to ensure eligibility in inter-institutional transfers.

#### Inputs:

- Applicant's TC ID number
- Exam type and score fields

#### Outputs:

- Verified exam score data

### YÖKSİS API: Transcript verification

- Pulls verified academic data, including transcript, current program, completed credits, GPA, and disciplinary records.

#### Inputs:

- Student identity information
- Educational institution details

#### Outputs:

- Verified GPA (original scale)
- Completed credit numbers

### Email SMTP Service: Notifications

- Send system-generated notifications such as application status changes, correction requests, and final result announcements.

#### Supported Notifications:

- Email
- Internal UTMS notifications

### Digital Signature Module

- Allows Faculty Board to sign final documents electronically
- 

### 3.3 GENERIC PERFORMANCE REQUIREMENTS

- **Response time**

*\*The system must respond to all user actions within  $\leq 3$  seconds, and heavy operations (document handling, background checks) must complete within  $\leq 5$  seconds.*

- **Concurrent users**

*\*The system must support 500+ concurrent users during peak periods without performance degradation, maintaining stable response times and system availability.*

- **GG% uptime during application periods**

*\*The system must remain highly available during peak transfer application periods to ensure that students can submit applications without interruptions.*

- **Mobile responsive**

*\* The system should provide a seamless experience on smartphones and tablets, ensuring that all pages, forms, and notifications are easily accessible and functional on different screen sizes.*

- **Supports TR s EN languages**

*\* The system must provide full bilingual support in Turkish and English, allowing users to switch languages easily.*

---

### 3.4 LOGICAL DATABASE REQUIREMENTS

#### Entities:

1. **Applicant**
2. **Application**
3. **Document**
4. **Eligibility**
5. **Ranking**
6. **Approval**
7. **Audit Log**

### 3.5 DESIGN CONSTRAINTS

- **HTTPS mandatory**

*\*All communications between users and the system **shall** be encrypted using HTTPS to ensure data security and prevent unauthorized access.*

- **KVKK-compliant data storage**

*\*User data **shall** be stored in compliance with KVKK regulations, protecting personal information and ensuring legal privacy requirements are met.*

- **Immutable audit logs**

*\*The system **shall** maintain audit logs that cannot be altered or deleted, enabling secure tracking of all user actions and system changes.*

- ****Shall** run on IZTECH infrastructure**

*\*The system should be fully compatible with the IZTECH IT environment, including servers, network configuration, and existing software standards*

---

### 3.6 OTHER REQUIREMENTS

#### **Versioning for all documents**

- *\*The system **shall** maintain version history for every document, allowing users to access and revert to previous versions if needed.*

#### **Full change tracking**

- *\*All modifications to records and documents should be tracked, showing who made changes and when, to ensure accountability.*

#### **Parallel approvals allowed if permitted**

- *\*The system should support simultaneous approval workflows when allowed, enabling multiple administrators to review and approve requests at the same time.*
